

Documentation utilisateur – EasySave

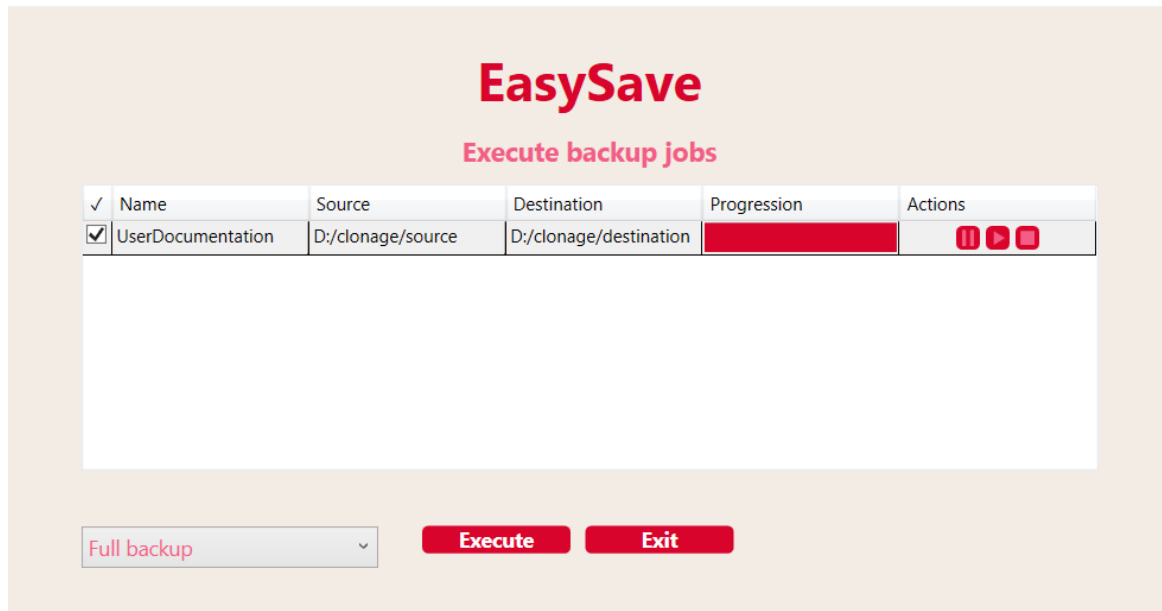

EasySafe is an easy-to-use backup tool. On startup, you'll be taken to the main menu :

To select an application mode, simply click on the button associated with the action you wish to perform (create a backup, run it, retrieve it or modify settings). Pressing the Add a backup job button takes you to the menu for adding a backup. All you have to do is enter the name you want to give your backup, the source path and the destination path. Once you've done this, click on “Validate”, and a list of the files in the source folder will be displayed. Select the files you want and validate. To return to the main menu, click on the “Exit” button.

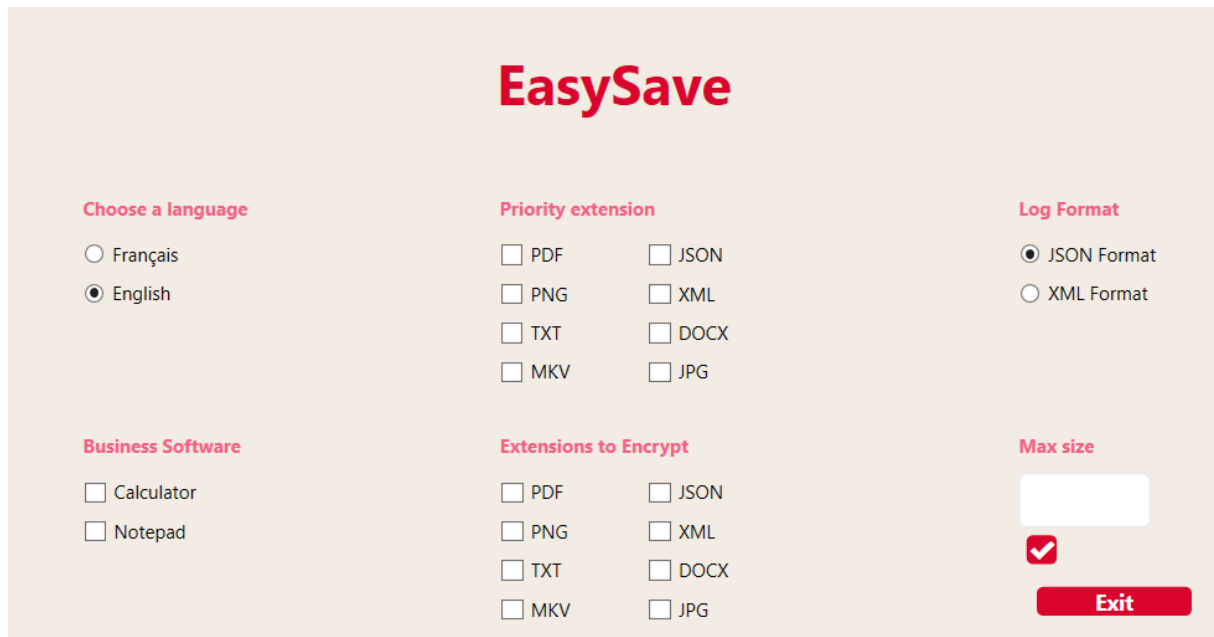

To execute the backup job, click on the “Execute a backup job” button, and you'll be taken back to the backup you created earlier. Click on the backup you wish to execute, then select the backup type from the drop-down list. To execute the backup, simply click on the “Execute” button. To return to the main menu, click on the “Exit” button.

To recover a backup, click on the recover a backup job button, and the list of backups will appear. Simply select the backup you want from the list that appears, and choose its backup type. This backup will return to your source file.

To modify parameters, click on the “Modify parameters” button, and you will be taken to this view.

The image shows the 'EasySave' configuration window. It has a light beige background and a red title bar. The title 'EasySave' is in a large, bold, red font at the top center. Below the title, there are six sections arranged in a 2x3 grid. Each section has a red title and contains various settings. The 'Choose a language' section has two radio buttons: 'Français' and 'English', with 'English' selected. The 'Priority extension' section has two columns of checkboxes for file types: PDF, PNG, TXT, MKV in the first column, and JSON, XML, DOCX, JPG in the second column. The 'Log Format' section has two radio buttons: 'JSON Format' and 'XML Format', with 'JSON Format' selected. The 'Business Software' section has two checkboxes: 'Calculator' and 'Notepad'. The 'Extensions to Encrypt' section has two columns of checkboxes for file types: PDF, PNG, TXT, MKV in the first column, and JSON, XML, DOCX, JPG in the second column. The 'Max size' section has a text input field and a red checkmark icon. At the bottom right, there is a red 'Exit' button.

You can choose a language by clicking on the radio buttons in the “Choose a language” section. In addition, you can choose the business software that will be used to cut the application by checking the box corresponding to the software you want in the “Business software” section. You can also choose the file types to be executed as a priority by checking the boxes in the “Priority extensions” section, and the file types to be encrypted by checking the boxes in the “Extensions to encrypt” section. You can choose your log type by checking the radio button associated with the format you want in the “Log format” section. Finally, you can choose the maximum size of files to be saved in parallel.

Logs are in the « Logs » folder

Inside we find the log states :

And daily logs :
